

SELF-ADHESIVES & RUBBER PARTS

General Statement

Due to the nature of rubber compounds (Solid and Sponge) and the range of chemicals that may go into the manufacture of parts, please be aware that any Self-Adhesives used, may degrade over time and no guarantee can be given to its suitability and performance.

We recommend customers to test adhesives on the specific applications (where possible) or in similar environmental conditions to ensure its suitability and longevity.

We would urge customers to take into consideration the storage of parts post production. Parts are to be stored in a dry ambient location and avoid hot, cold, damp, and humid conditions.

As with any adhesive product, consideration must be paid to the 'shelf life' of products that have any type of Self-Adhesive tape or backing.

If you require more specific information regarding a Self-Adhesive backing please let us know, we are happy to help.
